- Real time wireless feedback throughout calibration available.

Visualize the Possibilities

Why do some children react differently than others to certain situations? Would you like to see what they see, know where they are focused, and measure what draws their attention?

Now you can with the Mobile Eye-5 glasses – a wireless device that combines highly accurate point of gaze with the ability to record what children are saying as they view their natural environment. This truly portable solution provides the ability to record children's eye movement in a variety of real world applications. Whether collecting data while interacting with a teacher, playing with playmates, interacting with the latest technology device, or learning a new sport, the Mobile Eye-5 glasses will provide you with valuable insights.
